

How to start lino engraving -Step-by-step tutorial-

Step 1

I draw my design and gouge the plate on my line to obtain a hollow and to create a relief. The finer the gouge used, the finer and more precise the hollow.

Step 2

On a flat surface (e.g. a plate), I put ink, roll my roller on it until the ink crackles. I apply the colour evenly with my roller on my plate.

Step 3

I place my paper on the previously inked plate, press the surface on the back of the paper to print the subject. (I can use the back of a spoon to press the paper against the plate).

Step 4

I get my printed pattern and can repeat it over and over again! And I simply clean my tools with water.
